Basement Finishing Wiring

When you transform your basement in New Jersey into a home office, gym, or additional living space, you add to your home's value. To have full use of the space, you may have to upgrade your electrical system to add a basement outlet box with higher amperes. Our technicians can also provide finishing electrical wiring services, so you have the juice to power electronics, lighting, and new appliances such as a washer and dryer.

Electrical Code for Basements

Before you attempt to install an outlet on the basement wall yourself, consider how well you know the local building codes. We suggest that you hire a master electrician to help you navigate the process of obtaining permits, scheduling inspections, and making any necessary changes to remain in compliance.

Our master electrician knows all relevant electrical codes for your home in New Jersey. For example, did you know that the national electric code requires an outlet every 12 feet? Also, if you install a bathroom or countertops, you'll need to use GFCI outlets to comply with most state, local and national codes.

Most basement refinishing jobs require upgrades to your electrical service panel. Contact DK Electrical Solutions to schedule a consultation and determine whether adding a 15- or 20-amp circuit breaker will help provide power to your new living area. Our qualified electrician can handle all the details needed to properly install lights, circuit breakers, and outlets in your basement.

Basement Electrical Wiring Cost

It costs between \$2 and \$5 per square foot to the wire of basement remodel. It all depends on your plans for your finished basement. Simple jobs may require new lighting schemes, while more complicated renovations require significant changes to accommodate large appliances.

When we bid on a job, our technician provides an upfront quote that we commit to. This saves you the hassle of paying an hourly wage that can quickly lead to cost overruns.

Basement Electrical Ideas

There are endless ways to improve an unfinished or outdated basement. For example, fluorescent lights provide efficient illumination, while recessed lighting can add ambiance and help you define different areas. We also suggest installing different kinds of lights on dedicated circuits for the power you need without causing an electrical short.

If you decide to move your washroom downstairs or add a second refrigerator, you can count on DK Electrical Solutions to add the necessary amperes to the breaker box.

Three-way switches make it convenient to turn lights off and on safely.

Whatever changes you have in store for your basement renovation, we can design and implement the corresponding electrical upgrades. [Check out our online gallery](#) to see our work or to get ideas for your home renovation projects.
